20 ns Rise Time Filter ORTF-20

Advanced TLP/HMM/HBM Solutions

1 Features

- 50 Ω rise time filter for TLP measurements
- 20 ns rise time (±10 %)
- better than 23 dB return loss
- up to 3.2 kV pulse peak voltage

2 Description

The rise time filter is used to generate a pulse rise time of 20 ns at the output of the filter. The filter can be connected directly at the pulse output of the high voltage pulse generator. The rise time of the pulse at the input of the filter should be set to 100 ps, or at least less than 1 ns. The filter is fully symmetrical. Input and output can be exchanged.

3 Electrical Characteristics

General

The product data contained in this data-sheet is exclusively intended for technically trained staff. You and your technical departments will have to evaluate the suitability of the product for the intended application and the completeness of the product data with respect to such application. Our products are solely intended to be commercially used internally and should not be sold to consumers. This data-sheet is describing the specifications of our products for which a warranty is being granted by HPPI GmbH. Any such warranty is granted exclusively pursuant the terms and conditions of the respective supply agreement. There will be no guarantee of any kind for the product and its specifications. For further information on technology, specific applications of our product, delivery terms, conditions and prices please contact HPPI:
