1 Features

- High current wafer-level and package-level 98 Ω HMM probing with grounded DUT
- Built-in high surge 48 Ω pulse reflection suppression resistor up to 80 A peak
- Fast rise time due to low inductance GND loop
- Variable pitch from 50 μm to 5 mm
- Tungsten replacement probe tips
- SMA pulse force pigtail
- Compatible to PHD-3001A interface
- High reliability

2 Description

The PHD-HMM-48-1 is used for the HMM pulse referenced to system ground and can thus be applied on grounded test objects (Fig. 2.2).

The built-in high surge 48 Ω pulse reflection suppression resistor provides high quality HMM waveforms at fast rise times <1 ns and high currents in the range of 80 A peak (Fig. 2). The pulse force signal is connected to the PHD-HMM-48-1 frontend using a 100 mm long SMA pigtail. The current sensor should be connected directly to the pigtail cable.

Both pulse force probe tip and GND probe tip are 100% tungsten and can be replaced very fast and easy. A repair kit with spare parts is included in the shipment (Fig. ??). The flexible GND loop allows probing pitch in the range from 50 μm to more than 5 mm. For the GND needle a separate DC micropositioner is required, which is not included with the PHD-HMM-48-1.

The PHD-HMM-48-1 can be used for efficient wafer-level as well as package-level HMM probing.
3 Replacement Tungsten Needles

Preferred replacement tungsten carbide probes, 7.5 μm tip radius, 15° taper, 0.508 mm (20 mil) diameter from AMERICAN PROBE & TECHNOLOGIES Inc.: http://www.americanprobe.com/

Also H-20242 Tungsten needles from Quater can be used. The needles have 0.508 mm (20 mil) diameter and 25.4 mm (1000 mil) length. 19.05 mm (750 mil) for the probe head needle on request. For ordering please refer to http://www.quater-research.com/accessories.htm or other tungsten needle suppliers.
