

Pulse Width Extender TLP-3011C

Advanced TLP/HMM/HBM Solutions

1 Features

- Fully automatic pulse width extender
- Pulse width from 125 ns up to 1.6 μ s in 68 digital programmable steps of 25 ns
- High pulse output current up to ± 40 A
- Can be connected to TLP-3010C/4010C/8010C/12010C systems for automatic pulse width extension
- High performance and high quality components

2 Description

The pulse width extender TLP-3011C is used to extend the pulse width of the TLP-3010C/4010C/8010C/12010C systems up to 1.6 μ s in 68 digital programmable steps of 25 ns. Maximum output current is ± 40 A at ≥ 100 ps rise time. The pulse width can be configured in the HPPI software graphical user interface. The TLP-3011C is shipped including accessories: high voltage interconnection cable (HV-N), pulse width extension control cable and an external output rise time filter ORT-50 (50 ns). Fig. 1 shows the front and rear side of the TLP-3011C.
